

## Abstract

The contact piece (1) comprises a portion of female type able to accommodate a corresponding portion of male type. This female type portion includes a contact clip (4) provided with elastic fingers (42) oriented towards the opening of a lodging (10) destined to accommodate said male type portion. The piece is completed with a bushing (5) encircling the clip and provided with a front side (50) comprising a passage opening (51) serving as gauge, accepting or refusing the passage of a male portion according to its diameter.

In this manner, the elastic fingers (42) always operate in an elastic mode and never suffer a permanent deformation. Such a disposition has many other advantages.
